S/4HANA QUICK CHECK

SAP S/4HANA MIGRATION

With the introduction of SAP S/4HANA as the successor to the previous R/3 Suite, the existing data model has been fundamentally changed. This also affects the roles and transactions that must be taken into account during a migration.

As an authorization expert, SIVIS has been supporting customers for over 20 years and has created tools and methods to reduce the eff ort required for migrations to a minimum.

The SIVIS S/4HANA Quick Check reveals which transactions in your roles are omitted, forwarded or replaced by SAP Fiori Apps. Our experts will then support you with the migration of your roles.

PACKAGE S/4HANA QUICK CHECK

- Importing the respective roles during a migration
- Analysis of existing roles & transactions
- Analysis of the found results in relation to transaction codes which:
  - be omitted
  - are replaced
  - are replaced by SAP Fiori Apps
- Final presentation incl. recommendation for action

Package price: from 4,000.00 € plus VAT

OUR GOAL: YOUR FUTURE!

In order to give you a comprehensive overview of the affected roles, we implement the program in your SAP environment or upload your roles to our system.

We use the SAP Simplifications List to check the information obtained for relevant changes in the roles. In addition, we display the OSS hints for in-depth research in our program.

WE CHECK EVERYTHING!

In a presentation we will show you the identified roles and, together with you, define the measures to be taken for your optimum migration to S/4HANA.

The recommended course of action naturally also takes into account the individual requirements of your company. The SIVIS Suite offers the right tools to make your authorization concept S/4HANA capable.

Relaxed into the S/4HANA migration thanks to our Quick Check.
With our intelligent software we support you during the migration and build
a solid basis for your future authorization concept.

VORTEILE AUF EINEN BLICK

- Identification of efforts for migration to S/4HANA
- Quick check of the currently used roles
- Simple overview of the affected roles
- Reduced costs compared to manual control
- Recommendations for further steps
